## **STATEMENT FOR BIODEGRABILTY OF PULP**

Hereby we confirm that in the production of RaumaCell's fluff pulp *BIOBRIGHT -TCF GRADE for W.I.P., Italy* only wood raw material is used. The production of pulp is based 100% on renewable raw material resources, i.e. the wood. The above mentioned fluff pulp grade consist of cellulose (80 %) and hemicelluloses (appr. 20 %). Cellulose and hemicelluloses are wood based carbohydrates, i.e. polysaccharides. The wood fibres (fluff pulp) are organic material and are fully recyclable and biodegradable and can be composted.
